

Year 2023

GHG emissions report ARMSWISSBANK CJSC

Foreword

Congratulations on pursuing your climate journey. Greenly is proud to contribute to ARMSWISSBANK CJSC's climate strategy, and support you on a path towards Net Zero.

This report synthesizes the results of your greenhouse gas (GHG) emissions assessment. It is a first step toward identifying reduction actions and helping you plan for the energy transition.

While offering some benchmarks to compare with other companies, a GHG emissions assessment is mainly used to identify ways to improve your global impact and to help you define a reduction trajectory. Achieving your decarbonization targets involves engaging your ecosystem of employees, customers and suppliers who will need to align with your new targets.

The evaluation of your emissions is in line with carbon accounting international standards as standardized by the GHG Protocol.

We are happy to support you on your journey. The entire Greenly team would like to thank you for your outstanding commitment.

Alexis Normand

Overview

Introduction

- Carbon accounting methodology
- GHG emissions assessment parameters
- Executive summary

Emissions report

- Results by scope
- Results by activity
- Focus by activity

Focus on action plans

- Estimated impact
- Estimated costs
- Implementation step by step

Conclusion - What's next?

- Summary of reduction actions
- Next steps

About Greenly

• Our vision & team

Appendix

• Scope 1-2 details

Scope 3 details

Why care about the energy transition

Regardless of our management of the environmental crisis, organizations and individuals are heading towards major upheavals that will affect entire ecosystems.

Source: Carbone 4

Physical risks and

constraints

Transition risks and

opportunities

Two types of disruptions

Physical risks...

Definition

Risks related to exposure to the physical consequences of global warming

Average temperature increase and more extreme fluctuation

Intensification of extreme weather events (rain, heat waves/droughts, etc.)

Sea level rise

Scarcity of resources (especially energy), food and water insecurity

Biodiversity collapse

What are the consequences if I don't commit?

- 1 Deterioration of infrastructure, value chain losses
- 2 Direct economic consequences
- Low resilience to future events and physical constraints (e.g. natural disaster)
- 4 Dependence on an increasingly fragile supply chain (availability and cost of resources, flexibility, fluctuation of fossil fuels)
- 5 Disruptions in living conditions (housing, food, health, transport, etc.)

| Transition risks (and opportunities)

Definition

Risks related to the transition to a low-carbon economy

	Regulatory developments and mitigation
J	policies

Markets and sectors migrating towards promoting low-carbon value creation: Opportunities to seize Associated market risks

Growing stakeholder demands on environmental commitments

Shifting employee mindsets and expectations regarding the environmental reputation of their employer

What are the opportunities if I commit?

- 1 Optimization of flows and costs
- 2 More sustainable business activity and corporate strategy
- 3 Increased competitiveness within my ecosystem
- A Resilience and autonomy of activities in the face of the new socio-economic paradigm
- 5 Lower exposure to legal and financial constraints and sanctions

It is critical to set a course for Net Zero

REACHING PLANETARY DECARBONIZATION GOALS IMPLIES THAT ALL BUSINESSES TRACK THEIR EMISSIONS, REGULATIONS ARE KICKING IN

Applicable Regulations

Solving the Climate Equation

MEASURING EMISSIONS IS THE FIRST STEP TO SETTING A PATH TOWARDS NET ZERO

Carbon accounting methodology

Scope 1 | Direct emissions

GHG emissions generated directly by the organization and its activities.

Examples: combustion of fossil fuels, refrigerant leaks, etc.

Scope 2 | Indirect emissions related to

energy consumption

Emissions related to the organization's consumption of electricity, heat or steam. **Example:** electricity consumption, etc.

Scope 3 | Other indirect emissions

Emissions related to the organization's upstream and downstream operations and activities **Example:** transportation, purchased goods and services, sold products, etc.

9

How are emissions computed?

ANALYZING EMISSIONS, AUTOMATING TRACKING

0% of your emissions of 2023 are calculated using activity data

*depending on the availability of data

Methodological reference: ADEME note on the use of accounting data for the GHG Accounting

GHG emissions assessment scopes

Entity

ARMSWISSBANK CJSC From March 2023 to February 2024

Primary data

Accounting data

Employee survey

Buildings data

Activity data from the following modules: Travels, Consultants & Contractors, Investments, Real Estate Investment, Sovereign bond, IT Inventory

Methodology

Official and approved GHG Protocol methodology; GWP 100

Emissions generated in and outside the country of operation are accounted for. The methodological details of the calculation of each carbon footprint source are available on the Greenly platform.

Measurement scope All emissions under operational control

Category includedCategory excludedCategory irrelevant

Scope 1

- ✔ 1.1 Generation of electricity, heat or steam
- \checkmark 1.2 Transportation of materials, products, waste, and employees
- ✗ 1.3 Physical or chemical processing
- ✓ 1.4 Fugitive emissions

Scope 2

- ✓ 2.1 Electricity related indirect emissions
- $\pmb{\textbf{x}}$ 2.2 Steam, heat and cooling related indirect emissions

Scope 3

- ✓ 3.1 Purchased goods and services
- ✔ 3.2 Capital goods
- ✔ 3.3 Fuel- and energy- related activities not included in Scope 1 or Scope 2
- ★ 3.4 Upstream transportation and distribution
- ✔ 3.5 Waste generated in operations
- ✔ 3.6 Business travel
- ✔ 3.7 Employee commuting
- ✓ 3.8 Upstream leased assets
- ✗ 3.9 Downstream transportation and distribution
- ★ 3.10 Processing of sold products
- ★ 3.11 Use of sold products
- ★ 3.12 End-of-life treatment of sold products
- ✗ 3.13 Downstream leased assets
- ✗ 3.14 Franchises
- ✔ 3.15 Investments

| Executive summary

This report summarizes the results of ARMSWISSBANK CJSC's 2023 GHG emissions assessment based on the information collected and subject to its completeness, correct categorization and validation. This assessment is useful in identifying the main areas for mitigating your environmental impact.

Q What is

What is included in this category?

Activity data

0 tCO2e (0%)

CO2 emissions from investments, calculated using PCAF methodology based on investment value and asset emissions.

۲

How to reduce the impact of this category?

You can adopt the following measures:

- Add conditions to your obligations to improve your influence over your investments.
- Implement ESG criteria in your due diligence process prior investment.
- Influence investments to adopt best practices within governance bodies.

Methodology

- 1. Emissions calculated using expense data, by multiplying a quantity by an emission factor.
- 2. The emission factors used for this category come from the following databases: Company Report 1.0
- 3. Details of the methodology used to calculate each carbon footprint source are available on the Greenly platform.

Expense data

243k tCO2e (100%)

Focus on Real Estate Investments

Asset name	Investment type	Absolute emission (tCO2e)	Attribution Factor (%)	Financed emissions (tCO2e)	Financed emissions by \$ invested (tCO2/k€)	Methodology
RE1	Real Estate (on-balance sheet loan)	2,438	32.42	790	19.16	Emissions measured by estimating the emissions of the underlying building using an average intensity per surface.
RE 2	Real Estate (on-balance sheet loan)	538	74.00	398	26.80	Emissions measured by estimating the emissions of the underlying building using an average intensity per surface.
RE 3	Real Estate (on-balance sheet loan)	480	73.66	354	9.56	Emissions measured by estimating the emissions of the underlying building using an average intensity per surface.
RE 4	Real Estate (on-balance sheet loan)	381	45.40	173	0.71	Emissions measured by estimating the emissions of the underlying building using an average intensity per surface.
RE 5	Real Estate (on-balance sheet loan)	101	81.60	82	0.67	Emissions measured by estimating the emissions of the underlying building using an average intensity per surface.
RE 6	Real Estate (on-balance sheet loan)	135	50.20	68	0.94	Emissions measured by estimating the emissions of the underlying building using an average intensity per surface.
RE 7	Real Estate (on-balance sheet loan)	105	51.86	54	18.73	Emissions measured by estimating the emissions of the underlying building using an average intensity per surface.
RE 8	Real Estate (on-balance sheet loan)	78	65.34	51	3.25	Emissions measured by estimating the emissions of the underlying building using an average intensity per surface.
RE 9	Real Estate (on-balance sheet loan)	52	91.38	48	0.80	Emissions measured by estimating the emissions of the underlying building using an average intensity per surface.
RE 10	Real Estate (on-balance sheet loan)	56	80.00	45	0.38	Emissions measured by estimating the emissions of the underlying building using an average intensity per surface.

Q Remark

1. Focus on top 10 Real Estate investments (on-balance sheet loan) in terms of financed emissions into Armswissbank's GHG Assessment for this year.

- 2. A building's annual emissions are attributed to the mortgage provider using a loan-to-value approach.
- 3. The methodology used to measure the carbon emissions associated with the loan involves estimating the emissions of the underlying building using an average intensity per surface area, and reallocating to Armswissbank the proportion of the building's emissions based on its "ownership" of the building.
- 4. The full results, with additional analytics, can be found on your platform under the Real Estate module.

Focus on Real Estate Investments - Absolute & Financed emissions

Q Remark

- 1. Absolute emissions are the estimated emissions of each property loan based on the emissions of the underlying building.
- 2. Financed emissions are those reallocated in Armswissbank's GHG assessment, after application of the attribution factor (asset ownership).
- 3. The attribution factor here is equal to the ratio of the outstanding amount at the time of GHG accounting to the property value at the time of loan origination

greenly

| Focus on Real Estate Investments - Financed emissions by \$ invested

Financed emissions by thousand of euro invested by asset

Q Remark

1. The emissions here are the ratio between emissions re-attributed to your GHG assessment (after application of the attribution factor) and the amount invested.

| Focus on Investments (Business loans and Corporate bonds)

Q Remark

1. Focus on top 10 investments (Business loans, Corporate bonds) in terms of financed emissions into Armswissbank GHG Assessment for this year.

2. The methodology used to measure carbon emissions is outlined here and is based on the availability of data for each asset.

3. The full results, with additional analytics, can be found on your platform under the **Investment** module.

Focus on Investments (Business Ioans and Corporate bonds) – Absolute & Financed emissions

Q Remark

- 1. Absolute emissions are the estimated emissions of each issuing/borrowing company by NACE code, country of operation and revenue. For some companies, one of these three data items was missing, and they were therefore excluded from the calculation.
- 2. Financed emissions are those reallocated in Armswissbank's GHG assessment, after application of the attribution factor.
- 3. The attribution factor here is calculated based on the formulas that can be found into the data collection file previously shared. It represents your weight in the sum of equity and debt of a given portfolio company. Each type of asset has a different calculation formula. The ratio is also updated to take into account GHG assessment year investments.

Focus on Investments (Business Ioans and Corporate bonds) – Financed emissions by \$ invested

Q Remark

- 1. The emissions here are the ratio between emissions re-attributed to your GHG assessment (after application of the attribution factor) and the amount invested.
- 2. The attribution factor here is calculated based on the formulas that can be found into the data collection file previously shared. It represents your weight in the sum of equity and debt of a given portfolio company. Each type of asset has a different calculation formula. The ratio is also updated to take into account GHG assessment year investments.

| Portfolio coverage and Data Quality Scores

98% of Armswissbank's AUM are covered in the financed emissions category of the GHG assessment, ensuring robust GHG assessment across asset classes.

3. The methodology used to measure the carbon emissions associated with the loan involves using the PCAF provided average of EFs relating to Bulgaria and Romania's residential buildings.

4. The full results, with additional analytics, can be found on your platform under the Real Estate module.

| Portfolio coverage and Data Quality Scores

98% of Armswissbank's AUM are covered in the financed emissions category of the GHG assessment, ensuring robust GHG assessment across asset classes.

Total GHG assessment with PCAF EF

This report summarizes the results of ARMSWISSBANK CJSC's 2023 GHG emissions assessment based on the information collected and subject to its completeness, correct categorization and validation. This assessment is useful in identifying the main areas for mitigating your environmental impact.

Focus on Energy

Activity data

Methodology

1. Emissions calculated using activity and expense data, by multiplying a quantity by an emission factor.

< 0.1% of total

- 2. The emission factors used for this category come from the following databases: Base Empreinte Ademe 23.1, Base Empreinte Ademe 23.2, Base Empreinte Ademe 23.4, Greenly 1.0, IEA 2023
- 3. Details of the methodology used to calculate each carbon footprint source are available on the Greenly platform.

Expense data

Focus on Services purchases

greenly

| Focus on Services purchases

Services purchases emissions by category

Activity dataExpense data19 tCO2e (20%)72 tCO2e (80%)

What is included in this category?

CO2 emissions from service purchases, covering professional services. Primarily from upstream energy/material use and energy consumed during service provision.

How to reduce the impact of this category?

You can adopt the following measures:

• Implement carbon impact conditions in your service purchase policy

Methodology

- 1. Emissions calculated using activity and expense data, by multiplying a quantity by an emission factor.
- 2. The emission factors used for this category come from the following databases: Base Empreinte Ademe 23.2, Company Report 1.0, Greenly 1.0, IEA 2023
- 3. Details of the methodology used to calculate each carbon footprint source are available on the Greenly platform.

Focus on Travel and Commute

Focus on Travel and Commute

Activity dataExper31 tCO2e (90%)3.3 tCO

What is included in this category?

CO2 emissions from travel and commuting, covering various transportation modes. Includes direct fuel combustion and indirect fuel production emissions.

How to reduce the impact of this category?

You can adopt the following measures: No actions selected for this category

Methodology

- 1. Emissions calculated using activity and expense data, by multiplying a quantity by an emission factor.
- 2. The emission factors used for this category come from the following databases: Base Carbone Ademe 22.0, Cornell Hotel Sustainability Benchmarking Index 2023, Greenly 1.0, Uk GHG Conversion Factor 2024

greenly

Focus on Buildings

Focus on buildings

ACTIVITY ANALYSIS

Activity emissions

145 tCO2e (98%)

Methodology

48%

- Emissions linked to heating and energy use are calculated by multiplying (where available) the building's electricity or gas consumption by an emission factor. Failing this, an 1. estimate is calculated on the basis of building surface area, or even the number of employees when surface area is not provided.
- Waste-related emissions are estimated on the basis of the number of employees. 2.
- 3. Air-conditioning emissions correspond to refrigerant leaks (average estimate).

0% of total

Estimated emissions

3.5 tCO2e (2.4%)

Focus on Employees

Focus on Employee Meals

Number of meals per employee per year

GHG emissions (tCO2e / employee)

Methodology

Analysis is based on the employee survey, which obtained a 100% response from your employees to whom the questionnaire was sent (108 responses).

The data used to calculate meals-related emissions are from the French Agency for Ecological Transition (ADEME).

Meal emissions are not accounted for, this slide is only an analysis of the responses to the employee survey.

| Focus on Employee Commute

On average, your employees travel 5.3k km each year, emitting 471 kgCO2e for home-work commuting.

Methodology

Analysis is based on the employee survey, which obtained a 100% response from your employees to whom the questionnaire was sent (108 responses). The data used to calculate commute-related emissions are from the French Agency for Ecological Transition (ADEME).

More details on the employees page of Greenly

Focus on Action Plans

How can I implement effective reduction actions?

To meet global targets, emissions will have to fall by 3 to 7% per year*. It's a tough target, but a necessary one!

WHAT ARE THE BEST PRACTICES FOR ACHIEVING THESE OBJECTIVES?

These first steps will enable you to maximise your chances of success in implementing reduction actions.

Investments

Add conditions to your obligations to improve your influence over them Investments

It is quite difficult to have influence over your obligations. Buying sustainability linked bonds a convertible bonds allows you to have more control over your debt investments. "Sustainability-linked bonds (SLBs) have an innovative format that links the bond's coupon to the achievement of environmental, social or governance targets. Many SLBs now include targets for reducing greenhouse gas emissions." (Banque de France). Convertible bonds allow you to turn your obligations into equity after a certain predefined event happens (see AP slides for equity). To reduce your emissions, this event could be an increase in emission intensity or emissions.

Benchmark

BNP Paribas is one of the leader in Sustainability-Linked financing. The bank issued three Sustainability-Linked Loans in 2023: https://group.bnpparibas/en/press-release/bnp-paribas-grants-the-first-inclusive-sustainability-linked-financing-to-three-majo r-microfinance-players-in-france-italy-and-brazil

Estimated Impact

Investing in Sustainability Linked Bonds with emission reduction conditions will lead to a reduction in emissions of your portfolio while you hold the bond.

Estimated Cost

The cost will depend on the obligations. If you add a interest increase condition, a company that does not respect its emission reduction targets will have to pay you more interests.

Implementation

IDENTIFY investment opportunities with emission reduction potential or low emissions that issue convertible or Sustainability Linked Bonds.

BUY the obligation.

2

3

IF the conditions in the contract are not met, exert your rights and increase the interest rates/convert your bond into shares.

Influence real estate assets to use renewable energy

Investments

Benchmark

According to the PCAF, a net-zero building "uses renewable energy, preferably generated on-site, if technically feasible, and/or an energy supply that will be fully decarbonized by 2050 at the latest to fully cover its remaining, very low energy use". Those can be on-site or procured from external suppliers. For more details, please refer to the slide "Set up on-site renewable energy production" and "Purchase renewable electricity".

Hannon Armstrong Sustainable Infrastructure Capital invests in green real estate real estate which includes real estate that only consumes renewable energy.

Estimated Impact

Energy use in residential and non-residential buildings contributed by 50% and 32% to global building emissions. Emissions could reduce by the amount above with renewable energy.

Recommended Service Providers

The service provider will change from one region to the other, please contact your local energy provider or government for more information. EVALUATE the feasibility of replacing your current energy systems with a on-site production system or an external renewable energy provider.

2 DEVELOP a comprehensive implementation strategy (detailed plan with steps, timelines, resource allocation).

3 IMPLEMENT monitoring solutions to track energy consumption and cost savings.

Estimated Cost

For external procurement, in France, the nuclear energy costed 33€ per Mwh in 2023. Coal costed 20 to 25€ per Mwh. Renewable energies (solar and wind on land) cost on average 70€ per Mwh. The cost of installing renewable energy solutions varies from situation.

The estimated total financial impact can be positive as green building selling prices are 16% higher, premiums in rental prices are higher about 6%.

Improve the energy efficiency of current real estate investments Investments

Buildings are responsible for 36% of carbon emissions in the EU. The Partnership for Carbon Accounting Financial expresses the need to double the energy efficient building rate in existing buildings. A net zero building is "A new or renovated net-zero ready building is highly energy efficient." (PCAF). According to the PCAF, energy efficiency of real estate goods includes building envelope; efficient heating, ventilation and air conditioning, and optimal lighting and appliance. For more information, please refer to the "Energy" slides.

other criteria) insulation costs might be compensated by higher selling prices (16% higher on average) and premiums in rental prices (about 6% higher).

Energy

Purchase renewable electricity

Energy

A Power Purchase Agreement (PPA) commits the buyer to purchase a specific amount of electricity from the producer over a set period at a fixed price. PPAs help finance renewable energy projects and reduce the carbon intensity of the supplied energy. Meanwhile, certificates of origin (RECs or GOs) certify the renewable source of electricity. They provide less stable revenue for suppliers and encourage renewable energy investments to a lesser extent.

Benchmark Implementation Lidl : Since March 2018, Lidl Ireland and Northern Ireland converted to using only renewable electricity. **BENCHMARK** the different energy Adobe : Adobe has committed to 100% of their operations with renewable electricity from 2035. providers to determine which offers the most interesting offer from a techno-economic perspective. Recommended **Estimated Impact** 2 DEVELOP a comprehensive Service Providers PPAs or RECs allow you to reduce to the same extent as installing renewable energy sources on implementation strategy (detailed plan with steps, timelines, your premises, but only if you account energy related emissions using the market-based resource allocation, relevant method. **Ekwateur** stakeholders). Eneercoop 3 IMPLEMENT monitoring solutions to track green energy consumption and cost / CO2e **Estimated Cost** savings. In the case of PPAs and RECs, energy prices might be higher than conventional electricity production. Contact a renewable energy provider to get a more precise quote.

Services Purchases

Implement carbon impact conditions in your service purchase policy Services Purchases

Procuring products and services often contributes to a significant portion of a company's emissions, with supply chains accounting for over 80% in consumer companies. To effectively address this issue, incorporating eco-conditions criteria into your company's procurement policy offers a straightforward and efficient strategy. To ensure suppliers' climate maturity, engage them through the Greenly Feature, facilitating a comprehensive understanding of their Climate Maturity. These criteria can be implemented with current suppliers and incorporated into the supplier selection process for new contracts.

Benchmark

In 2020, several companies joined forces to launch the 1.5°C Supply Chain Leaders with the Exponential Roadmap initiative. It involves management commitment to work with suppliers to halve their GHG emissions before 2030, establishing public targets, and supply chain GHG mapping and prioritization.

Estimated Impact

Increased visibility into the carbon footprint of your suppliers and the ability to implement diverse eco-conditions within your purchasing policy can yield a significant impact on your scope 3 emissions in the long run.

Can serve as a catalyst to encourage other industries to embark on decarbonization efforts.

Estimated Cost

Variable depending on the resulting changes in the supply chain.

Recommended Service Providers

Map the climate maturity of your Service Providers: Understand your supplier climate actions and maturity with the Greenly Procurement module

Implementation

LAUNCH the Greenly Sustainable Survey to assess suppliers' climate maturity and align their practices with your sustainability goals

2 SET and TRACK KPIs with Greenly dashboards: monitor suppliers' GHG emissions, Paris Agreement 2030 alignment, and SBTi certification.

3 SUPPORT and recognize suppliers' efforts. Offer tools, training, and resources to help them meet goals. Track and report their progress.

Conclusion

Conclusion

The GHG assessment made it possible to identify ARMSWISSBANK CJSC's main GHG emission sources so as to frame the company's carbon strategy and identify the items that need to be studied in greater depth with the aim of continuously improving the company's environmental impact.

It has been established that direct emissions (Scope 1) and energy-related indirect emissions (Scope 2) represent a small part of a company's impact. It is therefore essential to mobilize our company's suppliers and employees.

To meet the 2015 Paris Agreement target of a 50% reduction in GHG emissions between 2020 and 2030, we need to achieve a 5.9% reduction in emissions within one year (-14.3k tCO2e).

The recommended next steps in ARMSWISSBANK CJSC's carbon strategy are:

- 1 Study key emission sources in greater depth, if you opt for that. Your Climate Expert can help you decide between the different options available!
- 2 Establish GHG emission reduction targets and implement an action plan in order to achieve these targets.
- 3 Engage your suppliers using the Greenly supplier engagement tool.
- **Engage your employees** using the interactive Greenly training quizzes.
- 5 **Communicate with your stakeholders** about your commitment and carbon footprint, your reduction targets and the action plan considered.
- 6 Contribute to certified GHG reduction / sequestration projects available on the Greenly platform.

What's next?

Committing to a multi-year decarbonization strategy

A SUSTAINED EMISSIONS REDUCTION BASED ON THE LEVELS REQUIRED BY THE PARIS AGREEMENT

How can I build my reduction trajectory?

THE 4 KEY STAGES IN DEFINING AND FOLLOWING YOUR TRAJECTORY

Refine your greenhouse gas emissions assessment

g

Your 2023 assessment is based on **0%** of physical data, the rest being financial data. We recommend that you regularly improve the accuracy of your greenhouse gas assessment by adding more physical data. You will be able to quantify and monitor your reductions with precise targets in km, kg, kWh, etc.

Everyone should strive to achieve Net-Zero, not just the elite. Consumers want all companies to implement sustainable changes

Greenly is instigating a bottom-up climate revolution making it simple for all companies & employees to start their climate journey

Working with our initial 1,000 customers, we see that early adoption of carbon initiatives boosts growth and profitability, while helping companies start their climate journey

As regulations make carbon disclosure mandatory, Greenly is building highly-scalable tech to address the enormous influx of mid-market businesses joining the energy transition.

Greenly's product-led growth rests on three pillars: 1- a tech-enabled end-to-end carbon platform; 2- an outstanding UX to cultivate a growing community of climate leaders: 3- Lastly, a global ecosystem of partners who leverage Greenly to scale carbon accounting over their network.

Greenly is the world's fastest growing carbon management platform
